

## New Tilt Smart Lectern

Wilson & Gilkes has collaborated with AMX Australia to produce a lectern to suit the new AMX MVP-9000i touch panel control systems now common in boardrooms, classrooms and auditorium applications.

### Key features of the MVP-9000i

- ✓ Capacitive touch overlay
- ✓ Wired plus wireless network connectivity
- ✓ AMX SmoothTilt™ feature

The totally re-designed lectern top incorporates the MVP-TDS-9 docking station into the lectern. The MVP-9000i can sit flush with the lectern working top, providing an aesthetically pleasing and practical area. The capacitive overlay means papers inadvertently placed on the panel will not activate functions.

Additionally, Wilson & Gilkes have designed hinge mechanism based on AMX's SmoothTilt™ feature that allows the MVP-9000i to tilt out of the top up to 30 degrees. This allows for a perfect viewing angle for any presenter and for the touch panel to be un-docked for wireless operation.
