

Extron®

Extron's TouchLink™ touchpanels range feature a sleek, contemporary look with thin bezels to complement any decor. The extensive range of configurable control solutions allow your Audio Visual Systems to be tailored and scaled to meet the needs of your facilities with no complicated maintenance, code or planning.

Engineered for optimal performance and reliability, Extron's Control Systems may be teamed with their range of Switchers, Amplifiers, Cables and Speakers to offer complete peace of mind for your installation.

TouchLink® for iPad and MediaLink® for iPad are Apple iPad apps that provide users with wireless additional points of control for installed TouchLink touchpanels or Ethernet-enabled MediaLink controllers

TouchLink for iPad works with any TouchLink touchpanel. MediaLink for the iPad works with MLC 104 IP Plus and MLC 226 IP Controllers. No GUI configuration is required, as the apps emulate either the touchpanel or controller in a room, acting as additional points of control.

Extron's MediaLink® Controllers provide an easy-to-use solution for classrooms and meeting facilities. The range provides an easy to configure range of buttons for control of common AV systems including power on, power off, volume and input source selection. The included software provides an extensive Extron library of drivers for projectors and flat panel displays that can be easily updated as required. Various models also feature Ethernet access for remote monitoring and control over your network with schedules for operation or shutdown of AV Systems and email notifications.
