

Product Safety Recall

Product description

All Epson projectors **except** the L, Z, LS and EV series. For a full list go to epson.com.au/projector_recall/ or scan the QR code below.

What are the defects?

If the projectors are ceiling or wall mounted in a location that can result in their exposure to smoke, steam or vapours containing oils and solvents, the plastic casing can be weakened near where the projector is attached to the ceiling mount and the plastic may crack. If this occurs, the projector may fall from its mounting. Locations where these exposures are most likely to occur include near kitchens or near exhaust extraction fans.

What are the hazards?

If a projector falls from its ceiling or wall mounting, it may cause an injury to a user or a bystander.

What should consumers do?

Consumers who have a projector installed in an environment such as near a kitchen or an exhaust extraction fan should contact Epson on 1300 655 723 (Monday to Friday, 9am-5pm) to seek advice and, if necessary, arrange for a site inspection. Consumers with affected projectors will be given a free inspection service and the installation of a safety wire to secure the projector to the ceiling mount.
